OVERVIEW

The information herein is disclosed pursuant to the requirements of Bank Negara Malaysia's RWCAF – Disclosure Requirements (Pillar 3) and is published for the period ended 30 June 2016.

Any discrepancies between the totals and sum of the components in the tables contained in this disclosure are due to actual summation method and then rounded up to the nearest thousands.

The disclosure has been reviewed and verified by internal auditors and approved by Board of Directors of CIMBGH Group.

CAPITAL MANAGEMENT

Capital Structure and Adequacy

On 13 October 2015, BNM issued revised guidelines on the Capital Adequacy Framework (Capital Components), of which will take effect beginning 1 January 2016 and 1 January 2019 for banking institutions and financial holding company respectively. BNM also issued updated guidelines on the Capital Adequacy Framework (Basel II – Risk-Weighted Assets) which are applicable to all banking institutions with immediate effect and all financial holding companies with effect from 1 January 2019.

The risk-weighted assets of the Bank are computed in accordance with Standardised approach (SA approach) for Credit Risk and Market Risk and Basic Indicator Approach for Operational Risk based on the Capital Adequacy Framework (Basel II - Risk-Weighted Assets). The components of eligible regulatory capital are based on the Capital Adequacy Framework (Capital Components).

The comparative capital adequacy ratios as at 30 June 2015 were based on BNM's Capital Adequacy Framework (CAF).

Capital Structure and Adequacy (continued)

The minimum regulatory capital adequacy requirement for the total capital ratio is 8%. The tables below present the Capital Position of CIMB IB:

| Tier 1 ratio | 35.560% | 30.964% |
| Total capital ratio | 35.560% | 30.964% |

The Total Capital Ratio increased in June 2016 compared to June 2015 due to lower deduction from deferred tax assets. The credit RWA decreased mostly contributed by corporate exposures related to soft underwriting. The decrease in market RWA was mostly contributed by decreased FX RWA mainly due to lower exposure to USD, equity RWA due to decreased exposure to local shares and overall Interest Rate RWA mainly attributed to duration decayed overtime.

Capital Structure and Adequacy (continued)

The tables below show the RWA under various exposure classes under the relevant approach and applying the minimum regulatory capital requirement at 8% to establish the minimum capital required for each of the exposure classes:

The type of collateral recognised in each asset class is in accordance to the approach adopted in computing the RWA. The CRM shown is computed after taking into account the haircut as prescribed by the guidelines. For assets under SA, only financial collateral and guarantee are recognised. For assets under F-IRB Approach, guarantee, financial collateral and other eligible collateral are recognised. For assets under A-IRB Approach, the collateral has been taken into consideration in the computation of LGD, hence, excluded from the CRM disclosure.

INTEREST RATE RISK IN THE BANKING BOOK

For the purpose of this disclosure, the impact under an instantaneous 100 bps parallel interest rate shock is applied. The treatments and assumptions applied are based on the contractual repricing maturity and remaining maturity of the products, whichever is earlier. Items with indefinite repricing maturity are treated based on the earliest possible repricing date. The actual dates may vary from the repricing profile allocated due to factors such as pre-mature withdrawals, prepayment and so forth.

The tables below illustrate CIMB IB IRRBB under a 100 bps parallel upward interest rate shock from economic value and earnings perspectives.
